Profile

My name is Gerrit Elbrink, and I have been working as a free-lance programmer since I moved from the Netherlands to Germany in 2005.

The last couple of years I have mainly been working as lead programmer tending to a WordPress driven, API based Vue.js Front-end for a Swiss real-estate platform. The combination of the different components and programming languages used provided me with a unique insight into all the in and outs of modern coding, while at the same time offering me a chance to figure out and put to the test new techniques and approaches. Also it allowed me to extensively train myself in finding bugs and solutions to any type of problem that might pop up, and gave me a keen and swift insight into points of failure.

Employment History
